University of Minnesota

2021-2022 MnDRIVE Fellowships in Neuromodulation

Graduate ● Postdoctoral ● Resident/Clinical Fellows

Deadline to apply is January 19, 2021, 5:00 PM CST ● Recipients will be notified in March, 2021

Fellowship Program Description
The University of Minnesota’s Fellowships in Neuromodulation are funded by the Discoveries and treatments for brain conditions core area of the Minnesota Discovery, Research and InnoVation Economy (MnDRIVE) initiative, also known as MnDRIVE Brain Conditions. The fellowships will be awarded to outstanding graduate students (doctoral), postdoctoral trainees, and residents/clinical fellows pursuing research in neuromodulation. Projects with an industry partner are encouraged (but not required).

Application Process
The fellowship program requires that applicants complete an online fellowship application and arrange for letters of support to be sent to mnbc-fel@umn.edu. All application materials must be received by 5:00 p.m. CST on January 19, 2021. Please visit https://mndrive.umn.edu/brain/funding for more information about selection criteria and application instructions.

MnDRIVE
MnDRIVE is a landmark partnership between the University and the state of Minnesota. Discoveries and treatments for brain conditions, a MnDRIVE core area of research and partnership, addresses complex and debilitating brain-related disorders by leveraging university and state investments in medicine and engineering and extending our vibrant partnerships with medical device industries in Minnesota. For more information about the MnDRIVE core area of Discoveries and treatments for brain conditions, go to: https://mndrive.umn.edu/brain. For more information on MnDRIVE please visit: https://mndrive.umn.edu/.

Neuromodulation
Neuromodulation is a transdisciplinary field focused on treating neurological and neuropsychiatric disorders with technological interventions at the neural interface that are non-destructive, reversible, and adjustable. Neuromodulation research integrates basic science, engineering, and clinical disciplines to yield new insights into brain function and develop therapeutic innovations that include electrical, magnetic, optogenetic, and ultrasound technologies.
